Nautronic a/s have many years of experience in developing modular multisport scoreboard systems. We constantly adapt scoreboard systems to the prevailing regulations by the governing sports federations.

In the last few years Nautronic a/s have also been producing text display systems successfully. The text display systems are available with 8, 12, 18, and 33 cm text height and can be used either as a stand-alone system or mounted in scoreboards. The text display are with red LED's but are available in other colors on request.

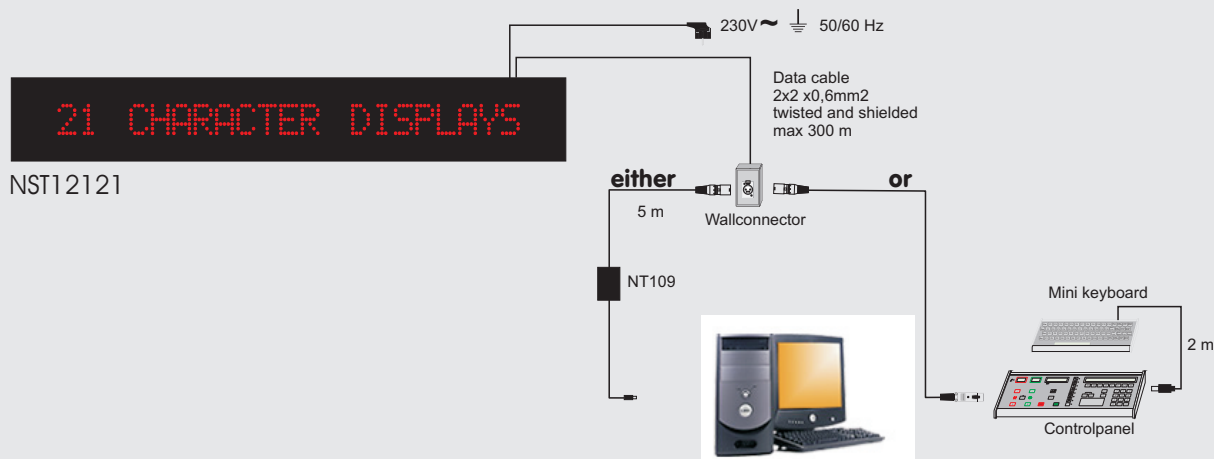

If mounted in a scoreboard the operation can be done from the scoreboard's control console and a small keyboard is used to enter team names, player names and/or advertising text. The text display can also be controlled from a PC which we recommend.

If the text display system is used as a stand-alone system the operation is only done from a PC. This way it can be used to show more information, indoor and outdoor, from sport arenas to exhibitions.

NAUTRONIC SCOREBOARD SYSTEM

All text displays can be used as stand-alone displays for information or mounted on scoreboards. Either way the specifications are the same. It is possible to send up to 819 characters to the display in one line.

The text can be scrolling from left or right, flashing or just pop up on the display. When using a control console contrary to PC there are some limits in the way of using the text display.

A 21 character text display can be controlled as two 10 characters textdisplays. F.ex. it is possible to display home and guest team names with only one 21 character text display.

PC controlled text displays:
The text displays are delivered with PC software. **The PC is not included.**

Specification of optional PC

Operating system	Microsoft Windows XP
Memory	256MB RAM
Harddisk	2GB
Communication	COM1. RS232. Min. 57.600 Baud
	Isolated USB/RS485 converter
Monitor	1024 x 768
